8 yrs IN SOFTWARE · 6+ AT SCALE	50k → 400k+ DAILY ACTIVE USERS	Millions / day TRANSACTIONS	100+ SDK RELEASES
------------------------------------	-----------------------------------	--------------------------------	----------------------

SUMMARY

Backend team lead — 8 years in software, six-plus scaling a high-concurrency transaction platform (**50k → 400k+ daily active users**). **Promoted twice** — engineer to senior to lead; led the monolith-to-microservices decomposition and the platform's integration SDK. Currently lead a **team of 4** across 6 module domains.

EXPERIENCE

SNSoft Sdn Bhd

- **Lead Software Engineer (Backend Team Lead)**

Dec 2025 — Present

 - Lead a **4-engineer backend team** across 6 module domains (legacy monolith + microservices)
 - Led the rebuild of the core transaction workflow service (**NestJS/gRPC + Temporal**) — **millions of audited transactions daily** (*led from senior into the lead role, 2025 → present*)
 - Designed **idempotent execution**: a retry can never duplicate a transaction
 - Published the integration SDK (**100+ releases**) — new-type onboarding cut from **30–60 min to 2 min** self-service; **200+ request types on one base workflow**
 - Production observability: **Grafana, Aliyun SLS** alerting, OpenTelemetry, Prometheus — database tuning took **one-day-timeout queries to 30-day windows**
 - Hand-built the **account-change ingestion pipeline** — **10M+ records/day** from 10+ heterogeneous sources (stream + durable-workflow composition)
 - Architecture gatekeeper** across Frontend, Business Intelligence, Payment, Provider and AI teams — **contracts split before code**; a cross-cutting feature once landed across **five repositories in one day**
 - 16 features shipped** through an artifact-gated AI delivery pipeline — human approval at every stage; AI never commits unreviewed
- **Senior Software Engineer**

Jan 2024 — Dec 2025

 - Scaled the platform 50k → 400k+ daily active users** — Redis Pub/Sub fan-out, atomic ID generation, cache redesign, zero downtime
 - Built **LiveChat**, the company's first production service on the new stack — solo start, mentored 3 juniors to independent ownership, clean handoff
 - Delivered the platform's reporting engine **before a business-intelligence team existed** — multi-view analytics over million-row datasets
 - Set the stack's reference patterns — configuration management, caching, protocol chain, observability — **adopted by every service that followed**

Software Engineer

Dec 2019 — Jan 2024

- Co-delivered platform-wide **multi-currency (USDT) payment support** across deposits, withdrawals and transfers
- Shipped **regulatory filings at million-row scale** — automated file slicing, hard deadlines met
- Integrated **third-party providers** — WebSocket heartbeat and reconnection hardening for live data feeds
- **Hardened the withdrawal flow** in a dedicated security-strengthening pass (2024)
- Built the operational reporting that later grew into the platform's reporting engine

Hitachi Ebworx — Mobile Engineer

Apr 2018 — Oct 2019

- **Built Great Eastern Singapore's first insurance point-of-sale (POS) mobile app** — hybrid web/mobile, delivered to production
- Owned the deployment process — **automated the daily QA release**
- Financial-industry delivery — waterfall & agile lifecycles, Jira/Confluence

EARLY CAREER

QA & Field-Test Engineer Intern, OPPO Electronics Malaysia HQ — field testing and testability improvements (2017)

IT & Network Support Intern, Chin Hin — IT support across 23 branches (2014)

SKILLS

LANGUAGES	TypeScript (advanced) · JavaScript / Node.js 20+ · Protocol Buffers · SQL · Java & Rust (working)
BACKEND	NestJS · gRPC · Express · Socket.io / WebSocket · Temporal.io · Apache Pulsar
DATA	MongoDB / Mongoose (aggregation, sharding, Atlas Search) · PostgreSQL · Redis (Pub/Sub, Cluster) · ClickHouse · Hologres · Apache Flink (Java DataStream, Flink SQL) · change data capture (MongoDB → Hologres)
OBSERVABILITY & INFRA	Grafana · Aliyun SLS · OpenTelemetry · Prometheus · HashiCorp Vault · Docker · GitHub Actions · Alibaba Cloud · AWS S3
QUALITY	Jest · Testcontainers · JUnit 5 + JaCoCo · 80% coverage gate · weekly release train with full regression
AI ENGINEERING	Claude Code · Model Context Protocol (MCP) · artifact-gated agent pipelines · context engineering · NotebookLM module handbooks
PRACTICES	contract-first APIs (proto + JSON-Schema event registry) · event-driven architecture · idempotency / exactly-once · saga & compensation · domain-driven design · zero-downtime migrations

EDUCATION

Bachelor of Information Technology — HELP University · 2012–2017 · English · Mandarin · Malay
